Which tag pair should an indie game use? First-Person × Multiplayer

MADT 7202 Mid-Term · Panjapol Ampornratana 6810424009 · Repo: github.com/hhej/steam-tag-whitespace

Steam is the largest PC game store. Players vote tags onto each game; the top tags drive store search.

1 The decision

An indie studio's creative director picks the next game's two lead tags; if no pair passed the selection rule, they would pick a crowded one (table, last row).

2 Why a network

Counts show how common a pair is and how well it sells, not whether its tags belong to separate groups or which tag connects them. That needs the network.

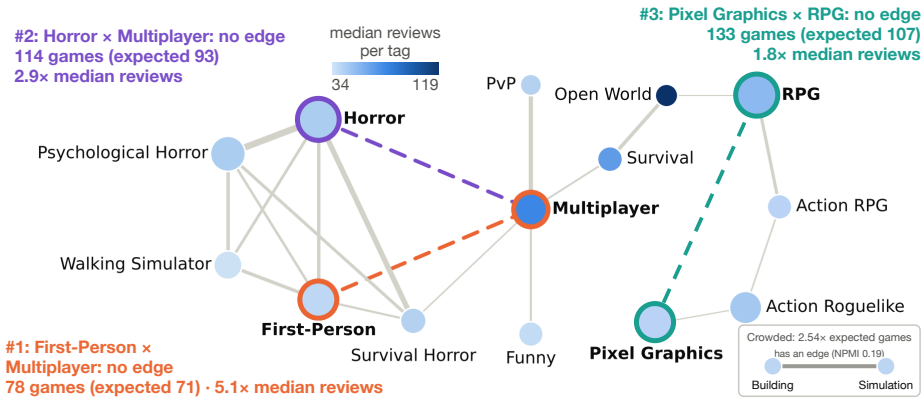

3 Data

Source	S1 FronkonGames steam-games-dataset (Hugging Face); S2 live Steam store.
Obtained	S1 downloaded (Sep 2025). S2: 1,000 random S1 games (random seed 7202), scraped 2026-10-14.
Legal	S1 MIT licence. S2: robots.txt allows these pages; one request per 1.5 s; no personal data.
Volume	S1: 9,094 Indie games (2023–24, ≥10 reviews) + 2,076 from Jan–Jun 2025 as a test set. S2: 996.
Check	S1 and S2 agree: 87% overlap in top-5 tags; review counts correlate at 0.98.
Bias	Favours games that sold; reviews count buyers, not demand; late-2024 games had less time.

4 Graph construction

Node	A Steam tag. Undirected, weighted tag–tag projection of the game–tag bipartite graph.
Edge	Co-occurrence in a game's top 5 tags; suggests relatedness, not a stated relation.
Resolution	Co-op, Online/Local Co-Op and Local Multiplayer merged into Multiplayer (84% of Horror × Multiplayer games were also tagged co-op).
Weight	NPMI: how much more often two tags meet than chance (0 = chance). Raw counts put 9 of the top 10 edges on the 5 most common tags; NPMI puts none.
Window	Top 5 tags per game, as the store page shows; with all 20, #1's review advantage drops from 5.1× to 3.0×.
Excluded	"Indie"; Early Access, Free to Play, adult tags; on >25% of games: Singleplayer, Adventure, Action, Casual, 2D, 3D, Atmospheric, Exploration.
Pruning	Tag on ≥1.5% of games (136); edge needs NPMI ≥ 0.10 and ≥0.5% of games (45) with both tags. 439 tags → **80 nodes, 177 edges**.

5 The picture

First-Person and Multiplayer connect only through Survival Horror: 2 steps apart, 5 without it. Shown: 14 of 80 tags. Dashed = pair with no edge; node size = games; line width = NPMI.

Selection rule: of pairs on ≥73 games, keep those **not crowded** (crowding = games ÷ expected ≤ 1.5; expected = games with A × games with B ÷ 9,094) whose tags share ≤20% of neighbours; rank by median reviews.

Rank: pair	Games	Expected by chance	Crowding	Shared neighbours	Median reviews (vs 40)
#1: **First-Person × Multiplayer**	78	71	1.10×	8%	204 (5.1×)
#2: **Horror × Multiplayer**	114	93	1.23×	8%	117 (2.9×)
#3: **Pixel Graphics × RPG**	133	107	1.25×	0%	70 (1.8×)
Crowded (box): **Building × Simulation**	74	29	2.54×	8%	136 (3.4×)

6 Findings

- **#1** is about as common as chance (NPMI 0.02, so no edge), yet its median game gets 5.1× the reviews (permutation test, $p < 0.001$). Horror games overall get only 1.0×.
- **Survival Horror is the only tag connecting** #1's two groups of neighbours: the one tag to watch.
- **Mostly robust:** top at all 8 pruning settings but in only 59 of 100 bootstrap resamples; on the 2025 test set, still not crowded (1.14×) with 2.4× reviews.

7 Recommended action

- Week 0: pitch a first-person multiplayer game.
- Weeks 1–6: prototype. Week 7: Coming Soon page tagged First-Person and Multiplayer/Online Co-Op.
- Every quarter: re-run and check #1 and Survival Horror (section 8).

8 What would change my mind

First-Person is spreading (27% of 2025 games). If #1 passes 1.5× crowding, I switch to #2 while it stays below 1.5× (1.45× in 2025), then to #3.
